

TimberMatic™ Maps TimberManager™

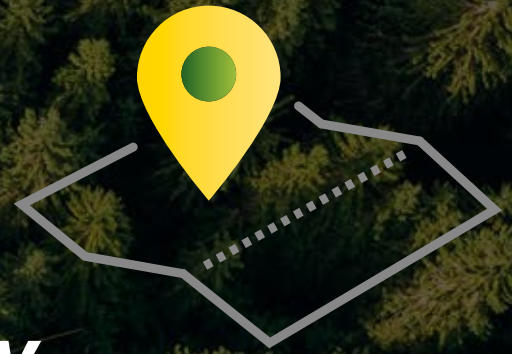

JOHN DEERE

**REAL-TIME MANAGEMENT
OF LOGGING OPERATIONS**

NO MORE GUESSING

***HIGHEST
OPERATIONAL EFFICIENCY
AND INTELLIGENCE***

John Deere introduces a new map based guidance, production-planning, and follow-up system as part of the TimberMatic software family.

The new TimberMatic Maps solution works as a part of the TimberMatic control system, and it comes standard in new G-Series Harvesters and Forwarders.

TimberManager is a web based solution for your office PC, tablet, or mobile phone. Both TimberMatic Maps and TimberManager utilize the JDLink™ telematics system. Get ready to take your operation to a new level of intelligent efficiency.

MORE CALCULATED, MORE CONFIDENT

OPERATOR ASSISTANCE

TimberMatic Maps is a new way of seeing the jobsite. The solution links harvesters and forwarders wirelessly to each other, making forestry operations intelligently easy.

- Real-time production views on map
- Live connection between machines
- Easy work planning based on the exact information on the remaining production located on the selected route or area
- Optimized path between two selected points, for the shortest route to the landing area

REAL-TIME OPERATIONS MANAGEMENT

TimberManager provides follow-up features and work-progress information on active jobsites. All jobsite information is synchronized through cloud service between the machine and the TimberManager in real-time.

- Supervisors can monitor operator tasks and times
- Contractors can make more effective planning and operative decisions
- More accurate machine-transport scheduling reduces fleet downtime

ESSENTIAL JOBSITE INFORMATION

TimberMatic Maps includes real-time production view over the map, which enables the operator to see all assortments and individual logs on-site. Detailed information on transported production at storage places is also available. Operators can make decisions with more factual information than ever before.

TIMBERMATIC MAPS SOFTWARE REQUIREMENTS

- TimberMatic 2.28 or newer
- JDLink account
- Operating system Windows 7 or newer
- 4G Modular Telematics Gateway (MTG) controller

TimberMatic Maps is a standard feature for new John Deere G-Series forestry machines.

WHAT OUR CUSTOMERS HAVE TO SAY

“Now the operator has more opportunities for planning. If industry needs fibre or a certain log type, the map instantly shows you where to find it.”

“TimberManager helps monitoring the machines and improves the daily management of the fleet and volumes, because the log volumes and the completion of logging areas can now be monitored reliably.”

“The key here is the real-time information”

**LESS
DRIVING,
NO FALSE
MOVEMENTS**

TimberMatic Maps TimberManager

Through secure cloud-sync, data is available in real time for all the stakeholders.

Intelligent map feature
— onboard software solution used by operators to complete the work systematically and effectively.

TimberMatic Maps makes the operator's daily work faster and easier. Monitoring jobsite and task, locating right log assortments accurately to a single log, and finding optimal routes to maximize load capacity — all this cloud synced in real time.

Offboard cloud-based solution
used by owners and operations managers for production planning and real-time follow-up.

TimberManager provides you with real-time data from your jobsites and makes it easier to control your operations. Track productivity, remaining workload and work time, to optimize the usage of your fleet.

60 m³

Information on the production inventory status both on the ground and at the roadside makes the contractor's work easier.

Marking of the Areas of Interest (AOI) and Points of Interest (POI) help the operators to choose the best routes and avoid the risks.

Individual logs can be identified from the piles.

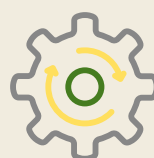

TimberMatic Maps TimberManager

HOW TO GET IT?

**Standard feature on
all new John Deere
machines.**

**Easy update to
G-Series machines.**

Do you have an older machine than a G-Series?
Please contact your local John Deere dealer for
more information on upgrades.
